

Cyber Insurance Readiness Checklist

The cyber insurance landscape is evolving quickly, with coverage requirements becoming increasingly stringent. Obtaining cyber insurance is not just about purchasing a policy; it requires thorough preparation and ongoing vigilance.

Invario's Cyber Insurance Readiness Checklist poses essential questions to help you determine if your cybersecurity program meets the latest insurance standards.

Does your organization perform regular cybersecurity health checkups and vulnerability assessments?

Do you have a process for regularly updating/patching all organization-owned IT devices?

Do you have the appropriate controls in place for collection, storage, and access to sensitive data such as personally identifiable information (PII)?

Do you use an endpoint detection and response (EDR) tool? Is it installed on all company devices?

Are employees able to install software of their choice on their organization-owned devices?

Do you allow your employees to work with organization-owned devices outside of the network?

Do you perform cybersecurity awareness training for all employees on a regular basis?

Do you require multifactor authentication (MFA) for access for all remote access to your network, company email, etc.

Does your organization perform regular cybersecurity health checkups and vulnerability assessments?

Do you have a written plan to restore your data from a backup if you ever need to?

Do you have an Incident Response Plan that details the steps your organization is to take in the event of a cyber incident?

Has your organization had a data breach or other security related incident?

If you find gaps in your readiness, don't worry - Invario is here to help. We can assist in strengthening your cybersecurity posture. This helps your organization qualify for coverage and can even lower your premiums. Let's get your organization prepared and protected!
